Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to a method of diagnosing predisposition to or presence of ovarian cancer, breast cancer and/or lung cancer comprising determining a level of SIM2 expression, SEQ ID NO: 7 at the mRNA level. Claims 1-4 will be examined with this Group to the extent a nucleic acid is assayed.

Group II, claim(s) 1-4 and 6, drawn to a method of diagnosing predisposition to or presence of ovarian cancer, breast cancer and/or lung cancer comprising determining a level of SIM2 expression, SEQ ID NO: 7 at the protein level. Claims 1-4 will be examined with this Group to the extent a protein is assayed.

Group III, claim(s) 18, 19, 21 and 42-47, drawn to the use of a SIM42 detecting agent, wherein said agent is an oligonucleotide for determining the level of SIM2.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature in claim 1 is a method of determining a level of SIM2 (SEQ ID NO: 7) thereby diagnosing ovarian, breast and/or lung cancer. Applicants' SEQ ID NO: 7 shares 100% sequence homology with sequence 109 from the publication. U.S. Patent Application Publication 2007/0014801 A1 (filed October 12, 2001) discloses a method, wherein a nucleic acid (mRNA) encoding a prostate cancer protein in a biological sample is assayed thereby detecting prostate cancer, as well as associated cancers such as

breast, ovarian and lung, see page 3, section 0047; page 4, sections 0063 and 0064; page 11, section 0112; page 22, section 0210. Therefore, the technical feature recited in claim 1 is not special. Accordingly, the groups are not so linked as to form a single general concept under PCT Rule 13.1.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1643

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
